

The closet solution is a fine and prestigious way to get the coats or any other items of your customers.

Our app is simple, easy to use and quick.

The administration console gives all the information about how many customers are in premises, at what time did they come and how many articles are in the closet.

The customer comes in, leaves his coat along with his print, quick and simple.

The app associates anonymously the print with a number that correspond to the hanger.

No more tickets and no more lost tickets or lost items because of errors made while delivering the items.

In our experience the use of tickets each and every day in the closets represents an enormous amount of chopped trees, with the closet solution no more paper is used thanks to biometrics, making it a prestigious way to keep your business ecologically friendly.
